

**Attach. Areas of Concern - Letter to Gov. Cuomo and Ms. Enck -2/15/2016**

Archived Superfund Site - Oak Materials, River Road

Located directly across Hoosick River from Village of Hoosick Falls wells.  
Town folks report that barrels of toxic waste buried/poured.

Record of Decision - Alex Schmigel - Site #442002 -

Documents indicate that barrels, toxic waste from Oak buried at site.  
May want to retest for PFOA's as not regulated at time of cleanup

Tax Parcel 47-1-12 - 20125 NY 22, Town of Hoosick (Est. of Mouawad (Salim Kaddo).

DEC needs to look at this property. Understanding that it was used for waste disposal. 17 acres. Do not believe any PFOA's. However, should be investigated because of close proximity to Hoosick Falls Central School, as well as located in watershed.

Tax Parcel - 37-2-6.2 - NY 22 -Charles A. Foster - Location near Falls Diner

on NY 22. Appropriate agency needs to check with Susan Stradinger, Town Clerk, Town of Hoosick. The Town of Hoosick has local law regulating dumping in Town of Hoosick. You will find a list of allowed dumping sites within Town. I cite the one above because of close proximity to area where wells are contaminated.

Tax Parcel - 27-10-9.20 - Saint Gobain Performance Plastic Corp., 1 Liberty St.

My family home (in family since 1880's) was within two blocks. In 1988, we made

the decision to sell property and move outside village limits. Two factors influenced this decision 1. Air pollutants that were being released from the plant.

2. Possible soil contamination. Vacant Land - Tax Parcel - 27.10-9.5 (owned by Kaukas family). The Kaukas family always allowed children access to land to sleigh

ride, hike, etc. As far back as the 1980's, locals would talk about colored water being discharged from facility. My recommendation is when testing possible soil contamination that tax parcel 27.10.9.5 be tested along with properties on Smith St. and Hovey Avenue that border the Saint Gobain's plant on Liberty St.

According to Toxics Release Inventory Program, Saint Gobain released 496,654 pounds of pollutants (2005-2013) Oak Mitsui also released pollutants during this period, but factory site soon to be demolished. I am not able to find updated releases by Saint Gobain, but would suggest monitoring.

Has there, or are there plans to test the sludge at the Village's wastewater treatment plant?

Will there be health advisory on eating fish and swimming in Hoosick River by DEC?

-end-
